About Me

Aspiring IT student, highly motivated to become a future IT professional. Ever since high school I wanted to be educated in as many fields as possible, so that I can view the world from different perspectives. This fact directly correlates to my agile problem-solving skill. I am under belief that the proven orthodox solution may not always be the most effective one and that there is always space for improvement.

My passion for staying up to date with the latest technologies also ensures, that my work attitude stays agile and fresh. I am eager to join an organization where I can continue to grow and make a significant impact.
